TRICES ROAD REZONING GROUP

PRIVATE PLAN CHANGE TO THE OPERATIVE SELWYN DISTRICT PLAN AND SUBMISSION ON SELWYN DISTRICT PLAN REVIEW TRICES ROAD, PREBBLETON

PRELIMINARY SITE INVESTIGATION - CONTAMINATION

EXECUTIVE SUMMARY

In response to instructions from Aston Consultants, Fraser Thomas Limited (FTL) undertook a Preliminary Site Investigation (PSI) for Lot 1 DP 73583, Lot 2 73583, Part RS 3122, RS 39794, Lot 1 DP 3896, Lot 1 DP 5284, Lot 1 78905, Lot 1 DP 360577, Lot 2 360577, Part RS 2423 ('site'). The site comprises eight properties (10 separate Records of Title) and is located between Trices Road and Hamptons Road to the north and south, and Birches Road and rural properties to the west and east, respectively.

This investigation involved a desktop study, site walkover, and reporting associated with potential land contamination issues.

The main rationale and objectives for this investigation were:

- To identify the main actual or potential contamination issues due to ongoing and historic use of land within the site.
- To confirm that the site is suitable or can be made suitable for the proposed rezoning.

This investigation has been managed, reviewed and approved by a Suitably Qualified and Experienced Practitioner (SQEP), as defined in the National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health (NESCS).

The NESCS governs a number of activities, including soil sampling, soil disturbance, subdivision and changes of land use on potentially contaminated land in New Zealand. In general, the rules of the NESCS apply to sites on which it is "more likely than not" that a HAIL (Hazardous Activities and Industries List) activity has occurred or is occurring (Regulation 5(7)).

This investigation has confirmed that the subject site has only been used for rural/residential and grazing purposes. It identified the following localised potential or actual HAIL activities:

Activity A10: Persistent pesticide bulk storage or use including sport turfs, market gardens, orchards, glasshouses or spray sheds. This relates to persistent pesticide use associated with the former poultry farm (no longer present on site), orchards, and vegetable growing on Lot 1 and 2 73583, Lot 1 DP 3896, Lot 1 DP 5284 and Lot 1 DP 78905. It is recommended that these areas be further investigated and soil sampling undertaken to confirm identified HAIL activity.

- Activity I: Land subject to intentional or accidental release of hazardous substances in sufficient quantity that it could be a risk to human health or the environment. This applies to:
 - Historical railway along the western boundary of Lots 1& 2, DP73583, Pt RS3122 and RS39794.
 - Existing stockpiles on Pt RS 2423. The stockpiled soil appeared to be silts and sands and occasional gravel, with some demolition materials (concrete blocks) of unknown origin. Soil sampling may be required by Council to confirm the soils are not contaminated.
 - Rubbish and old machinery/car body remains on Lot 1 DP 73583, Lots 1 and 2 DP 360577, Pt RS 2423 (historical) These areas need to be cleared of rubbish and then the underlying ground inspected for signs of contamination (staining or odour). Soil sampling is likely to be required at this time to confirm the presence or absence of soil contamination.
 - Other activities such as historical fires and burn piles.
- Activity E1: Asbestos products manufacture or disposal including sites with buildings containing asbestos products known to be in a deteriorated condition. ACM demolition material from historical buildings (HAIL activity E1) on Lots 1 and 2 DP 73583, Pt RS 3122, Lot 1 3896, Lot 1 DP5284, Lot 1 DP360577, and Pt RS 2423. A review of the available historical aerials of these sites show that several small sheds/buildings have been historically present at least since 1940. Asbestos based products were prominent in New Zealand homes and other buildings from the 1920s to the mid-1980s. Therefore, it is likely that these soils could potentially be contaminated with asbestos from prior demolition activities. Hence, it is recommended that this area be further investigated and soil sampling be undertaken to confirm the identified HAIL activity.

In summary, based on the information presented in this report, whilst it is clear that historic HAIL activities have occurred at the site, it is uncertain what effects, if any, there have been on site soils. Therefore, in accordance with NESCS requirements, a targeted Detailed Site Investigation (DSI) is required in order to assess site soils to determine environmental effects, or otherwise.

If further investigation is not undertaken prior to lodging for resource consent, then the proposed subdivision would be a discretionary activity under Regulation 11 of the NESCS.

TRICES ROAD REZONING GROUP

PRIVATE PLAN CHANGE TO THE OPERATIVE SELWYN DISTRICT PLAN AND SUBMISSION ON SELWYN DISTRICT PLAN REVIEW TRICES ROAD, PREBBLETON

PRELIMINARY SITE INVESTIGATION - CONTAMINATION

1.0 INTRODUCTION

In response to instructions from Aston Consultants, Fraser Thomas Limited (FTL) undertook a Preliminary Site Investigation (PSI) for Lot 1 DP 73583, Lot 2 73583, Part RS 3122, RS 39794, Lot 1 DP 3896, Lot 1 DP 5284, Lot 1 78905, Lot 1 DP 360577, Lot 2 360577, Part RS 2423 ('site'). The site comprises eight properties (10 separate Records of Title) and is located between Trices Road and Hamptons Road to the north and south, and Birches Road and rural properties to the west and east, respectively.

It is understood that it is proposed to lodge a submission on the Proposed Selwyn District Plan, and a private plan change request to the Operative Selwyn District Plan, seeking rezoning of the above properties from "Rural" to "Residential", to enable subdivision of the site to create new lots, with an average lot size of 650m², but also include some areas of small lot residential development in the 400m² to 500m² size range. It is understood that the parcel of land bordering Birchs Road and Hamptons Road (approximately 2.8 ha) is also proposed to be rezoned, in order to create new lots, with an average proposed lot size of approximately 5,000m².

This investigation involved a desktop study, site walkover and reporting associated with potential land contamination issues.

The format of this report is as follows:

- Rationale, objectives and scope of work.
- Site details.
- Investigation methodology.
- Desktop study and site walkover results.
- Discussion, conclusions and recommendations.
- Site plans, representative photographs and other relevant information in appendix form.

This investigation has been managed, reviewed and approved by a Suitably Qualified and Experienced Practitioner (SQEP), as defined in the National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health (NESCS).

2.0 RATIONALE, OBJECTIVES AND SCOPE OF WORK

The main rationale and objectives for this investigation were:

- To identify the main actual or potential contamination issues due to ongoing and historic use of land within the site.
- To confirm that the site is suitable or can be made suitable for the proposed rezoning.

3.0 INVESTIGATION METHODOLOGY

The methodology used for this site assessment is summarised below:

- 1. Desktop study involving review of existing historical information for the subject site including aerial photographs, certificates of title, Council property files/databases and interviews with relevant people.
- 2. Site walkover investigation of the subject site, with a visual appraisal to identify any disturbed and potentially contaminated areas. Relevant photographs are set out in Appendix C.
- 3. Preparation of a PSI report including the results of the desktop study, site walkover survey and conclusions and recommendations.
- 4. Provision of site plans, relevant documentation and representative photographs as appendices to this report.

Fraser Thomas Limited Health and Safety Management Plan procedures were followed throughout the duration of the investigation.

4.0 SITE DETAILS

4.1 LOCATION, PROPERTY DETAILS AND LAND USE

The site comprises nine different properties and covers an area of approximately 28.4 ha between Trices Road and Hamptons Road to the north and south, and Birches Road and rural properties to the west and east, respectively.

The site is zoned "Rural" under the Selwyn District Plan.

Details of each of the individual properties making up the rezoning area are listed in Table 1, including the current land use.

Table 1: Property Details

Registered Owner	Address	Appellation	Area	Land Use
		Title	(ha)

Tania Maree Barrett				_

4.2 TOPOGRAPHY, GEOLOGY AND SOILS

The topography across the entire site is generally level, with some gentle undulations across the site.

In carrying out the appraisal of the site, reference has been made to the Institute of Geological and Nuclear Sciences geological web map (NZ 1:250,000). The map indicates that the site is underlain by unweathered, variably sorted gravel, sand, silt and clay of alluvial origin.

The results of a geotechnical investigation undertaken by Fraser Thomas Ltd on 2 July 2020, in general, indicate that the surficial soils underlying the site are likely to comprise alluvial sediments of the Springston Formation of Holocene age. No obvious surficial fill material was identified during the geotechnical investigation.

4.3 PROPOSED DEVELOPMENT

It is understood that it is proposed to lodge a submission on the Proposed Selwyn District Plan, and a private plan change request to the Operative Selwyn District Plan, seeking rezoning of the above properties from "Rural" to "Residential", to enable subdivision of the site to create new lots, with an average lot size of 650m², but also include some areas of small lot residential development in the 400m² to 500m² size range. It is understood that the parcel of land bordering Birchs Road and Hamptons Road (approximately 2.8 ha) is also proposed to be rezoned, in order to create new lots, with an average proposed lot size of approximately 5,000m².

5.0 DESKTOP STUDY AND WALKOVER SURVEY RESULTS

The results of the desktop study and the site walkover survey are summarised in this section and illustrated in the attached site features plan (drawing E00417-01), aerial photographs (Appendix B) and site photographs (Appendix C). Throughout the site walkover survey, a visual assessment was used to classify any foreign materials as particular contaminants, without any formal identification. Hence, reference to a specific contaminant in the survey results should essentially be read as "suspected contaminant", unless otherwise stated.

5.1 LOT 1 DP 73583

5.1.1 Site Identification and Use

The site details and ownership history are summarised below.

Table 2: Site Details and Ownership History

Registered Owner		Grant James Crabbe

	June 1989	Transfer to Grant James Crabbe and Rosemary Joyce Crabbe,
		mechanic

The CT information available indicates that the property was previously part of a larger property Pt RS 3122 and has had several owners, of various occupations until 1989, when current part owners took ownership. In 1996, the site was subdivided to create Lots 1 and 2 DP 73583.

5.1.2 Interviews

Mark Crabbe – Current owner

Mark's parents purchased the property in the late 1980's. At that time the sheds that had historically been used for poultry farming (caged eggs), were in a state of disrepair. They had not been used for a significant period of time. The sheds are understood to have been constructed of light timber framing with corrugated iron cladding. The sheds were demolished sometime during 1989 to 1990.

The two existing sheds/garages were built in the 1990s from new materials, and rebuilt again in 2016 and 2018.

No crops have been cultivated at the site during his family's ownership, and the only chemical used on site has been Roundup.

The site is currently used for grazing small numbers of cattle.

The site has previously been used for horse grazing.

5.1.3 Aerial Photographs

1940-44 Aerial

The subject site is almost entirely covered with grass and appears to be in pasture. A dwelling is located in the middle of the site along the northern boundary. The only other buildings present on site appear to be four sheds or shelters located south of the main dwelling. A railway is located along the western boundary of the site.

6

1955-59 Aerial

There only significant change from 1940-44 are the addition of what appear to be permanent shed structures. The sheds or shelters identified in the earlier aerial photograph are no longer

on the site. The remainder of the site is still in pasture.

1960-64 Aerial

A large shed (confirmed by owner to be poultry shed) is present across the eastern half of the

site. The fields in the western and south-eastern parts of the site appear to be used for

cropping.

1965-69 Aerial

Several sheds (confirmed by owner to be poultry sheds) can be seen immediately south and

west of the existing glasshouse. The remainder of the site appears to have been returned to

pasture.

1970-74 Aerial

The railway along the western boundary of the site appears to have been removed sometime after 1965-69. The remainder of the site is unchanged apart from a few extensions to the

existing poultry shed towards the east.

1975-79 Aerial

The only change from 1970-74 is the addition of a horse trotting track in the south-eastern

corner of the site.

1980-84 Aerial

There are no significant changes from 1975-79.

1990-94 Aerial

The site has changed significantly since 1980-84. All previously existing buildings have been

removed. A new dwelling has been constructed in the same location as the previous dwelling. Two new garages have been constructed to the south of the new dwelling. The remainder of

the site is in pasture, and there is no evidence of any other activity on the site.

1995-2015 Aerial

There are no significant changes from 1990-94.

Fraser Thomas

2019 Aerial

There are no significant changes from 2010-15; however, based on the results of the site walkover, the existing garages appear to have been either rebuilt or re-clad in corrugated iron.

5.1.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

1990 – Building permit documents for dwelling

The building permit documents indicate that the original dwelling located on the site was destroyed by a fire sometime in 1990. The documents do not specify the materials used in the construction of the original dwelling.

5.1.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 15 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR).

There records indicate the site has been subject to HAIL activity A10 (*Persistent pesticide bulk storage or use including sports turfs, market gardens, orchards, glass houses, or spray sheds*). The LLUR also notes the following: "Area defined from 1965 to 1984 aerial photographs. A poultry farm (persistent pesticides) was noted in aerial photographs reviewed" and the verified HAIL has not been investigated. The LLUR statement for this site is included in Appendix D.

5.1.6 Site Walkover Results

A site walkover of the subject site was undertaken by a FTL Engineering Geologist on 3rd July 2020. Site investigation photographs are provided in Appendix C. The site is located at the south-eastern corner of Trices Road and Birches Road.

The central part of the site is used for residential purposes, a house with two detached garages was noted. The driveway and area surrounding the garages had an unsealed metalled surface. The remainder of the site was vegetated with grass, and appears to be used for grazing a small number of cattle.

Various refuse items were being stored on bare ground behind the larger garage. These include old car bodies, old car batteries, paint and motor oil containers, and demolition material. No obvious leaking or spillage of paint or oils was observed in this area.

No obvious evidence of demolition material from the poultry farm identified in the LLUR was observed while on site.

5.1.7 Discussion

The existing property appears to have been part of a larger property (including Lot 2 DP 73583 to the south) since at least 1944. The eastern portion of the site appears to have been used for horticultural purposes sometime between 1960-1969 when several poultry sheds were visible in the aerial photos reviewed. - The remainder of the site has been used for grazing purposes until around 1999 when the original property was subdivided into Lots 1 and 2 DP73583.

Potential HAIL activities identified for this property relates to the following:

- Persistent pesticides associated with the poultry farm -HAIL activity A10.
- Anecdotally, the poultry sheds historically located on the site (which were demolished sometime during 1989 to 1990) are understood to have been constructed out of timber and corrugated iron. However, based on our experience with similar structures, it is possible that some asbestos containing material (ACM) may have been used in the construction of the sheds -HAIL activity E1.
- Heavy metals and asbestos associated with the destruction by fire of the original dwelling of unknown construction in 1990 - HAIL activity I.
- The storage of old car bodies and used batteries on bare ground behind one of the garages HAIL activity I.
- Heavy metals and PAHs associated with the historical railway located within the site along the western boundary until at least 1965-69 HAIL activity I.

5.2 LOT 2 DP 73583

5.2.1 Site Identification and Use

The site details and ownership history are summarised below.

Table 3: Site Details and Ownership History

	Aug 197	72		

June 1989	Transfer to Melville Edward Sutton and Elaine Patricia Sutton, Poultry Inspector Transfer to Grant James Crabbe and Rosemary Joyce Crabbe,
	mechanic

The CT information available indicates that the property was previously part of a larger property Pt RS 3122 and has had several owners, of various occupations until 1989, when current part owners of Lot 1 DP 73583 took ownership. In 1996, the site was subdivided to create Lots 1 and 2 DP 73583.

5.2.2 Interviews

Mark Sweney - Current owner

The property was purchased in 1996 as a vacant lot. A small pine forest of approximately 0.5 ha was subsequently planted, as well as a small orchard at the western side of the dwelling.

According to information provided by the owner, the only agrichemical used on the subject site was Orthene (insecticide). The owner indicated that Orthene was only used when the orchard was initially planted (1998 according to Council records – see below), and that the orchard was kept productive for only a short time as birds kept eating the fruit.

5.2.3 Aerial Photographs

1940-44 Aerial

The subject site is entirely covered with grass and appears to be in pasture. A railway is located along the western boundary of the site. No structures are present.

1955-59 Aerial

There are no significant changes from 1940-44.

1960-64 Aerial

The entire site appears to be prepared for crop planting.

1965-69 Aerial

Two sheds (confirmed to be poultry sheds) constructed on Lot 1 DP 73583 (north of the subject site) encroach approximately 10 m into the site along the middle of the northern boundary. The remaining site appears to have been returned to pasture.

1970-74 Aerial

The railway along the western boundary of the site appears to have been removed sometime after 1965-69. The western paddock appears to be used for cropping activities.

1975-79 Aerial

The site has been returned to pasture and a horse trotting track is located in the eastern half of the site.

1980-84 Aerial

There are no significant changes from the 1975-79 aerial.

1990-94 Aerial

The previously existing along the middle of the northern boundary have been removed.

1995-99 Aerial

There are no significant changes from the 1990-94 aerial.

2000-04 Aerial

A dwelling and shed have been constructed in the north-western corner of the site. The remainder of the site is in pasture.

2004-10 Aerial

Shelter belts have been planted at the site. Landscaping associated with the dwelling has been undertaken.

2010-15 Aerial

A forestry block is visible in the south-eastern corner of the site.

2019 Aerial

There are no significant changes from 2010-15.

5.2.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

- 1998 Resource consent (R302754) file note for new dwelling and intensive horticulture and nursery.
- 1999 Building consent for new dwelling
- 1999 Drainage Plan
- 2017 Internal Selwyn District Council (SDC) email regarding potential contamination issues on site.

The SDC email states the following:

"LIM note suggested.

This property was identified on a preliminary list (prepared by SDC in September 2014), of potentially contaminated sites due to its previous use as an intensive shrub and tree nursery in conjunction with intensive vegetable production. This SDC list along with other Information relating to the site has been separately assessed by ECan and the site has not been included on the Listed Land Use Register. Never the less this preliminary list is information that SDC holds in relation to the property so disclosure is appropriate enabling further consideration as to whether or not additional research is required relating to the existence or otherwise of previous uses. "

5.2.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.2.6 Site Walkover Results

A site walkover of the subject site was undertaken by a FTL Engineering Geologist on 3rd July 2020. Site investigation photographs are provided in Appendix C. The site is accessed via the southern side of Trices Road and also borders the eastern side of Birches Road.

The north-eastern corner of the site is used for residential purposes. A dwelling and shed are the only structures on site.

A small orchard is located at the western end of the dwelling.

A small forestry block is located in the south-eastern corner of the site. An empty container which contained chlorhexidine gluconate (Hibitane Organic), was observed at the edge of this

forest. The owner has indicated that Hibitane has not been used on the site, and that the empty drum was most likely used as a watering trough for horses.

No evidence of an intensive tree or shrub nursery was observed at the time of the site walkover.

The remainder of the site is divided into two paddocks, which are vegetated with grass and separated by windbreaks. There are several burn pile locations within these paddocks, which the owner has indicated have been used to burn brush/branch cuttings.

5.2.7 Chemical Risk Assessment

According to information received from the client, the only chemical used on site during the last few years is Orthene (insecticide). Research found that Orthene's active ingredient is acephate, which dissipates rapidly with half lives of <3 and 6 days in aerobic and anaerobic soils respectively, producing methamidophos and carbon dioxide, with the methamidophos degrading to immobile compounds within 20 days. Consequently, it is considered unlikely that orthene application would lead to any soil contamination.

5.2.8 Discussion

The existing property appears to have been part of a larger property (including Lot 1 DP 73583 to the north) since at least 1944. The aerials show that between 1960 and 1990 the buildings inferred to be poultry sheds encroached into the site along the northern boundary. The rest of the site appears to have been used for farming (grazing) purposes until around 1999 when the original property was subdivided into Lots 1 and 2 DP73583.

Potential HAIL activities identified for this property relate to the following:

- Persistent pesticides associated with the poultry farm, and orchard -HAIL activity A10
- Anecdotally, the poultry sheds are understood to have been constructed out of timber and corrugated iron. However based on our experience with similar structures, it is possible that some asbestos containing material (ACM) may have been used in construction-HAIL activity E1.
- Heavy metals and PAHs associated with the railway located within the site along the western boundary until at least 1965-69-HAIL activity I.
- Burn piles are unlikely to have caused soil contamination if only brush/branch. cuttings
 were burnt as advised by the owner. However, Council may require independent
 verification (i.e. soil testing) of this to confirm that no other potentially contaminating
 items were burnt (e.g. treated timber) HAIL activity I.

5.3 PT RS 3122 AND RS 39794

The CT information available indicates that the property has had several owners of various occupations since 1982. CT information before 1982 was unable to be obtained.

5.3.2 Interviews

The current owners were not interviewed as part of this investigation.

5.3.3 Aerial Photographs

1940-44 Aerial

The majority of the subject site is surrounded on three sides by a shelter belt, entirely covered with grass and appears to be in pasture. There are several buildings at the southern end of the site, which appear to comprise a dwelling and at least three sheds. The image quality is relatively poor, making it difficult to establish the land use in the vicinity of the buildings. A railway is located along the western boundary of the site.

1955-59 Aerial

The only significant changes from 1940-44, is what appears to be further sheds erected in the southern part of the site. The image quality is relatively poor, making it difficult to establish the land use in the vicinity of the buildings.

14

1960-64 Aerial

The only significant changes from 1955-59, is what appears to be further sheds and some trees

in the southern part of the site.

1965-69 Aerial

There are no significant changes from 1960-64.

1970-74 Aerial

The majority of the sheds appear to have been removed and replaced with a single, larger structure along the eastern boundary. There also appears to be some development

immediately north of the dwelling, although its purpose cannot be ascertained due to poor image quality. The railway along the western boundary of the site appears to have been

removed sometime after 1965-69.

1975-79 Aerial

A new building, inferred to be a dwelling, has been constructed in the southern part of the site. All previously existing structures appear to have been removed, with the exception of the

larger structure along the eastern boundary. The ground in the vicinity of the new dwelling

appears to have been cleared; it is unknown if it is vegetated due to poor image quality.

1980-84 Aerial

The south part of the site associated with the dwelling appears to have been significantly

landscaped. Several trees have been planted, and surrounding area is vegetated with grass.

1990-94 Aerial

Several trees have been planted in the vicinity of the dwelling.

1995-99 Aerial

The image quality is too poor to establish any significant changes, although it appears an

inground swimming pool has been built next to the dwelling.

2000-04 Aerial

The image quality is too poor to establish any significant changes.

Fraser Thomas

2004-10 Aerial

There does not appear to be any significant change to land use for the site. Shelter belts along the eastern and northern boundaries have been removed.

2010-15 Aerial

The paddocks in the northern two thirds of the site appear to have been used for cropping, and have been recently harvested. Two small sheds have also been constructed in this part of the site.

2019 Aerial

The southern part of the site has significantly changed. The pre-existing dwelling and swimming pool have been removed. A large new dwelling and new swimming pool have been constructed and significant landscaping has taken place. Approximately one quarter of the southern part of the site now appears to be covered in impervious surfaces (asphalt and concrete). The northern two thirds of the site have been fenced off in to paddocks which appear to be used for keeping animals.

5.3.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

- 1973 Building Permit documents for new house. Plans indicate soffits were made from ACM.
- 1973 Building Permit for new shed
- 1973 Building Permit documents for new pump house
- 1987 Building Permit documents for new swimming pool
- 2005 Letter from SDC regarding query about infilling a stock water race
- 2014 Building consent documents for new dwelling

5.3.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.3.6 Site Walkover Results

The site was unable to be directly accessed on 3rd July 2020. However, paddocks in the northern two thirds of the site were able to be observed from the property to the north. Site investigation photographs are provided in Appendix C. The site is located on the north-eastern corner of Hamptons Road and Birches Road.

The southern third of the site is used for residential purposes, this part of the site was unable to be directly observed.

The remainder of the site is divided into paddocks, which are vegetated with grass.

5.3.7 Discussion

Since at least 1944, the northern portion of the site appears to have been used for pastoral purposes, with parts of the site intermittently used for cropping activities, while the southern portion of the site has been used for residential purposes.

Potential HAIL activities identified for this property relates to the following:

- Asbestos may be present in the southern part of the site due to the demolition of previously existing buildings-HAIL activity E1.
- Heavy metals and PAHs associated with the railway located within the site along the western boundary until at least 1965-69-HAIL activity I.

No evidence of a historic stock race was found in any aerial photographs or during the site walkover, including checking for any stock race on adjacent properties that it would have connected into. Hence, this has not been listed as a potential HAIL activity.

5.4 LOT 1 DP 3896

5.4.1 Site Identification and Use

The site details and ownership history are summarised below.

Table 5: Site Details and Ownership History

Registered Owner		Time	othy John Cridge		
		Gina	Gina Ann Cridge

	Jun 2000		Transfer to Graham John Pye and Eileen Gillian Pye		
	Jan 2019		Transfer to Timothy John Cridge and Gina Ann Cridge		

The CT information for owners before 1979 was unable to be obtained.

5.4.2 Interviews

The current owners were not interviewed as part of the PSI.

5.4.3 Aerial Photographs

1940-44 Aerial

No development is present, and the entire site is in pasture. A wind break is located along the

western boundary.

1955-69 Aerial

There are no significant changes from 1940-44.

1970-74 Aerial

The majority of the site remains in pasture, however, a dwelling has been constructed in the

south-eastern corner.

1975-79 Aerial

There are no significant changes from 1970-74.

1980-84 Aerial

The existing dwelling has been extended and some landscaping has been undertaken. A shed like structure has been built midway along the eastern boundary. The remainder of the site

appears to still be in pasture. A shelter belt has been planted along the eastern boundary.

1990-94 Aerial

Further landscaping, including tree planting has taken place in the vicinity of the dwelling. It is

unknown whether these where orchard type plants. Rows of trees, can be seen in the northern

part of the site, is inferred to show orchard activities.

1995-99 Aerial

There are no significant changes from 1990-94.

2000-04 Aerial

The image quality is poor, however, the paddocks appear to have been subjected to cropping

activities. The suspected orcharding activities in the northern part of the site are still present.

Fraser Thomas

2004-10 Aerial

There does not appear to be any significant change to land use for the site. The landscaped area associated with the dwelling appears to have increased in size by 0.25 ha. The land use in this area is difficult to establish due to the image quality.

2010-15 Aerial

The site is generally in the same configuration as the 2004-10 aerial apart from a glasshouse and areas inferred to be used for growing vegetables seen in close proximity to the existing dwelling towards the southern end of the site. Three sheds can also be seen present surrounding the existing dwelling.

2019 Aerial

The site is generally in the same configuration as the 2010-15 aerial. The glasshouse and sheds are still present, but the growing areas appear to have been left to overgrow.

5.4.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

- 1972 Building Permit documents for new garage
- 1973 Building Permit documentation for new dwelling
- 1977 Building Permit documentation for new carport
- 1980 Building Permit documents for extension to dwelling
- 1990 Building Permit documents for extension to dwelling
- 1999 Building Consent documents for extension to dwelling
- 2006 Building Consent documents for extension to dwelling
- 2018 Building Consent documents for extension to dwelling

Architects plans for the new dwelling in 1973 specify that Polite was to be used for the Soffit board.

5.4.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.4.6 Site Walkover Results

The subject site was unable to be accessed on 3rd July 2020, as the current owners are not part of the rezoning group. The site is located on the northern side of Hamptons Road. The paddocks in the northern part of the site were able to be observed from the adjacent property to the east, although visibility was limited due to the windbreak.

The location of the suspected orchard activities was still planted with trees, however it was not possible to establish whether these were in fact part of an orchard.

The remainder of the site is divided into paddocks, which are vegetated with grass. The paddocks appear to currently be used for grazing a small number of sheep.

The residential part of the site was unable to be inspected for signs of contamination.

5.4.7 Discussion

Since at least 1944, the majority of the site appears to have been used for pastoral purposes. The only development on the site has only taken place sometime from 1970, in the south-eastern corner of the site. Generally, this appears to have involved residential activity, and since approximately 2004 the small scale growing of produce.

Since the original dwelling was constructed, it appears there has been five extensions added. The plans for the original dwelling indicate that the soffit boards were to be of Polite construction. It is unclear if any damage to the soffit boards occurred during any of the extension works.

Potential horticultural activity has been present in the northern end of the site from 1990.

Potential HAIL activity identified for this property relates to the following:

- Persistent pesticides associated with the inferred historical orchard-HAIL activity A10.
- Possible asbestos in the southern part of the site due to alterations to the existing buildings, which records indicate may have ACM-HAIL activity E1.

5.5 LOT 1 DP 5284

5.5.1 Site Identification and Use

The site details and ownership history are summarised below.

Table 6: Site Details and Ownership History

Registered Owner Lee		Lee	Michael Christopher Robinson	
Street Address 327		327	Trices Road, Prebbleton	
Legal Description	n	Lot	1 DP 5284	
Title		CB3	21/181	
Area (ha)		0.12	79

	Nov 1	921	Transfer to Joseph Nicholas, farm labourer	
	Dec 1	927	Transfer to David McKee	
	Feb 1946		Transfer to Horace William Gallagher	
	Jan 1956		Transfer to Russell Patrick O'Shaughnessy, farmer	
	Aug 1959		Transfer to name/occupation illegible	
	Sep 1	963	Transfer to Winnie Marion Sylvia McJarrow, farmer	
	Aug 2	014	Transfer to Lee Michael Christopher Robinson	

The CT information available indicates that the property has had several owners, mostly farmers until at least 2014.

5.5.2 Interviews

The current owners were not interviewed as part of this investigation.

5.5.3 Aerial Photographs

1940-44 Aerial

A dwelling is located in the northern half of the site, and sheds appear to be located along the southern boundary. The remainder of the site appears to be vegetated with grass.

1955-59 Aerial

There are no significant changes from 1940-44, other than a wind break surrounding the property.

1960-64 Aerial

There are no significant changes from 1955-59.

1965-69 Aerial

The only significant change is the addition of a garage in the northern part of the site. The extent of the shelter belt has been reduced.

1970-74 Aerial

The aforementioned garage has been extended to the house, and another shed has been constructed in the southern part of the site.

1975-79 Aerial

The image quality is poor, however, there appear to be no significant changes from 1970-74.

1980-84 Aerial

An extension has been added to the northern end of the dwelling.

1990-2010 Aerial

There are no significant changes from 1980-84.

2010-15 Aerial

The site is generally in the same configuration as the 2004-10 aerial. The land use in the vicinity of the house can be more clearly identified. An area inferred to be used for growing vegetables can be seen in the south western corner of the site. A further growing area can be seen along the southern boundary, but within the adjacent property (Lot 1 DP78905).

2019 Aerial

The site is generally in the same configuration as the 2010-15 aerial. However, the growing area in the adjacent property has been returned to grass.

5.5.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

- 1974 Building Permit documents for new garage
- 1977 Letter concerning unpermitted building.
- 1977 Building Permit documents for a new shed
- 1980 Building Permit documents for a new car port
- 1983 Building Permit documents for and extension to dwelling

The 1974 Building Permit documents for the garage which was shifted to the site indicate the cladding was consisted of either Polite or Durock (contains asbestos).

A letter from the County Engineer for Paparua County Council, dated November 1974, indicates that approval was granted for the garage to be moved to site subject to several conditions. The third condition stated that "All damaged sheets of Durock to be replaced". It is not known if this was undertaken.

5.5.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.5.6 Site Walkover Results

The subject site was viewed from the adjacent property on 3rd July 2020. The site is located on the southern side of Trices Road.

No obvious signs of contamination sources were visible within the site.

5.5.7 Discussion

Since at least 1944, the site appears to have been used for residential purposes.

Suspected vegetable growing has been present in the south-western corner of the site, from at least 2010 to present day.

Potential HAIL activities identified for this property relates to the following:

- Persistent pesticides associated with the historical growing activity covering the southwestern portion of the site – HAIL activity A10.
- Possible asbestos in the existing buildings, which records indicate may have ACM HAIL activity E1.

5.6 LOT 1 DP 78905

5.6.1 Site Identification and Use

The site details and ownership history are summarised below.

Table 7: Site Details and Ownership History

Registered Owner Eval		Evar	Ross Jeffs and Bronwyn Jeffs	
Street Address 322		321	Trices Road, Prebbleton

	Nov 1998		8 Transfer to John Pitura	
	Mar 2	014	Transfer to Evan Ross Jeffs and Bronwyn Jeff	

The CT information for owners before 1998 was unable to be obtained.

5.6.2 Interviews

The current owners have provided feed back via email as to the origins of the sources of the potential contamination identified during the site walkover.

The circular patch of discoloured ground observed in the paddock south of the dwelling is the result of a "Beer Keg BBQ" burning the ground.

The vegetable garden and orchard is understood to be organic, and no chemicals have been used.

The stockpiled soil identified in the paddock to the south of the dwelling is understood to comprise topsoil sourced from the site. The stockpiles were formed as for use a mountain bike jumps.

5.6.3 Aerial Photographs

1940-44 Aerial

The entire subject site appears to be vegetated with grass and used for grazing.

1955-1964 Aerial

There are no significant changes from 1940-44.

1965-69 Aerial

The southern three quarters of the site appear to be used for cropping purposes.

1970-74 Aerial

The entire site has been returned to pasture.

1975-79 Aerial

The image quality is poor, however, it appears that the northern half of the site is being used for cropping purposes.

1980-1994 Aerial

The entire site has been returned to pasture.

1995-99 Aerial

There are no significant changes from 1990-94, other than windbreaks having been planted in the northern part of the site.

2000-04 Aerial

A dwelling and detached garage/barn have been constructed in the northern part of the site. The remainder of the site is in pasture.

2004-10 Aerial

There are no significant changes from 1990-94. The paddocks adjacent to the dwelling have had some landscaping works undertaken. It appears a small shed has been constructed in the vicinity of the main garage/barn.

2010-15 Aerial

The site is generally in the same configuration as the 2004-10 aerial. The land use in the vicinity of the house can be more clearly identified. In the paddock immediately to the south of the dwelling, an area inferred to be used for growing vegetables can be seen.

Fraser Thomas

2019 Aerial

The site is generally in the same configuration as the 2010-15 aerial. However, the growing area appears to have increased in size with two timber structures visible in the immediate surroundings. There appears to be an extension to the garage/barn.

5.6.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

- 1998 Building Consent documents for new dwelling and attached garage
- 1998 Resource Consent for water bore
- 2000 Building Consent documents for new garage/barn

5.6.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.6.6 Site Walkover Results

A site walkover of the subject site was undertaken by a FTL Engineering Geologist on 3rd July 2020. Site investigation photographs are provided in Appendix C. The site is located on the south side of Trices Road and extends to Hamptons Road.

The northern part of the site is used for residential purposes, a dwelling and detached garage/barn was noted. Landscaped gardens, and paddocks vegetated with grass are also located in this part of the site.

The drive way has an asphalt surface.

In the paddock to the south of the dwelling and garage/barn. There is an area used for growing produce, comprising a vegetable garden and small orchard, which the current owners have confirmed is largely organic and is used for private use only. A small glasshouse was also present.

The barn, of timber pole construction and a concrete slab on ground floor, backs on to this paddock. The barn is used to store vehicles and equipment (lawnmower, tires).

A container has been placed next to the barn, and a make shift roof spans between the two. In this area, a circular patch approximately 500 mm in diameter of black discoloured ground was observed. The current owners have indicated that this is burnt ground from a keg BBQ.

The paddock is also used for storage of various vehicle trailers and campervans.

Small stockpiles of topsoil, understood to have originated onsite, were also observed within this paddock. The current owners have confirmed that these small stockpiles are part of a mountain bike track.

The southern three quarters of the site comprise paddocks vegetated with grass.

No features of note or areas of potential contamination were identified in the southern three quarters of the site.

5.6.7 Discussion

Since at least 1944, the site appears to have been used for pastoral purposes, with parts of the site intermittently used for cropping activities.

Suspected vegetable growing, orcharding and farm sheds are seen present in the paddock south of the dwelling, from at least 2010 to present day. Bronwyn Jeffs has indicated that the vegetable garden and orchard are for private use and are of organic nature.

The discoloured ground is the result of a "Beer Keg BBQ" burning the ground.

Based on the site walkover and feedback provided by the homeowner, no obvious potential HAIL activities were identified at the site.

5.7 LOTS 1 AND 2 DP 360577

5.7.1 Site Identification and Use

The site details and ownership history are summarised below.

Table 8: Site Details and Ownership History

			Hugh Simon Lindo	

The CT information for owners before 2006 was unable to be obtained.

5.7.2 Interviews

Anthony and Barbara George – Current owners

The property was purchased in 1996 and comprised the current dwelling and two sheds in the northern part of the site. The remainder of the site was previously used for trotting and pacing

of horses.

Since the George's have owned the property, the predominant land use has been sheep cattle

grazing. No sheep dips or footrot troughs were known to be located on the site.

Intermittently some of the paddocks located on the internal side of the former trotting track,

have been used to grow crops. The owners indicated that it was generally only one paddock per year, and were planted with either oats or hay. The soil was ploughed to a depth of

approximately 300 mm.

According to information provided by the owner, the only agrichemical used on the subject

site was Roundup, initially on the paddocks, but now mostly only used along fence lines in

order to keep growth off the electric fences.

5.7.3 Aerial Photographs

1940-44 Aerial

A building, inferred to be a dwelling and at least two sheds, are located in the north-western

corner of the subject site. Lot 1 appears to be used for cropping activities. The remainder of

the site appears to be vegetated with grass and used for grazing.

1955-59 Aerial

Several other sheds have been constructed in the north-western corner of the subject site. The

remainder of the site appears to be in pasture.

1960-64 Aerial

Lot 1 appears similar to the previous aerial while Lot 2 is used for cropping activities; the

remainder of the site appears to be in pasture.

1965-69 Aerial

The aerial appears similar to the previous aerial apart from cropping activities now visible

across remainder of Lot 1. Lot 2 appears to be vegetated with grass and used for grazing.

November 2020 Project No. CH00417

Trices Road, Prebbleton
Trices Road Rezoning Group

Fraser Thomas

1970-74 Aerial

The sheds identified in the 1955-59 aerial photo, have been demolished. Both lots have returned to pasture

returned to pasture.

1975-79 Aerial

There are no significant changes from 1970-74.

1980-84 Aerial

Two sheds have been constructed in the north-western corner of the subject site.

1990-94 Aerial

All pre-existing buildings in the north-western corner have been demolished. A new dwelling and two sheds have been constructed in the north-western portion of Lot 1. The remainder of the site is in pasture, and a horse trotting pacing track has been constructed.

1995-99 Aerial

There are no significant changes from 1990-94, other than windbreaks having been planted in the northern part of the site.

2000-2010 Aerial

There are no significant changes from 1995-99.

2010-15 Aerial

The site is generally in the same configuration as the 2004-10 aerial. The land use in the vicinity of the house can be more clearly identified. The paddocks immediately to the south of the dwelling and one paddock in the southern part of the site are used as storage areas for various vehicles, farm equipment, and general refuse items. Paddocks in the southern part of the site appear to have been used for cropping activity.

2019 Aerial

There are no significant changes from 2010-15.

5.7.4 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

1979 – Building Permit documents for new shed

Fraser Thomas

- 1981 Building Permit documents for two horse boxes
- 1985 Building Permit documents for new dwelling
- 1986 Building Permit documents for new stables
- 1988 Building Permit documents for extension to shed
- 2009 Building Consent documentation for extension to dwelling

5.7.5 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.7.6 Site Walkover Results

The subject site was viewed from the adjacent property on 3rd July 2020. The site is located on the southern side of Trices Road. The northern part of the site (Lot 1 DP 360577) is used for residential purposes, a dwelling and two sheds were noted. Landscaped gardens, and paddocks vegetated with grass are also located in this part of the site. One of the paddocks is used for keeping a small number of cattle. The drive way surface is a mixture of metalled and asphalt.

The sheds of timber pole construction and a mix of earth and concrete slab on ground floors. The sheds are used to store vehicles and equipment. The western most shed is also used to store a small amount of fertilizer on pallets. The eastern shed is being used as a workshop (non-commercial).

The paddocks immediately to the south of the dwelling and sheds, are currently being used to store vehicles, farm equipment, and general refuse. Items of interest to this PSI include, above ground fuel storage tanks, orchard spraying apparatus, and numerous empty chemical containers. A burn pile, covered in dirt but with some visible organic material, is also located in the eastern most paddock.

The owner has stated that the above ground fuel tanks have never been used, as there has been problems with fuel theft in the area. The orchard spraying equipment, comprising a 500L tank, is a recent addition to the site and is currently empty. It has not been used on site.

The empty chemical containers are being stored on a wooden pallet, with pallets used as walls on three sides. The containers appear to be empty, and are in a generally clean condition. No obvious leaks, or odours were observed while on site. The chemicals stored in these containers were generally lubricants, and cleaning agents.

The southern three quarters (Lot 2 DP 360577) of the site comprise paddocks vegetated with grass surrounded by a former horse trotting track.

A paddock in the southern part of the site, is also currently being used for storage of items including heating oil tanks, oil drums, and old building materials.

Old oil drums and stockpiles of soil and plant material, were also observed, in the south-eastern corner of the site.

5.7.7 Discussion

Since at least 1944, the majority of the site appears to have been used for pastoral purposes, with parts of the site intermittently used for cropping activities. Potential HAIL activities identified for this property relates to the following:

- Asbestos may be present in the north-western corner of the site due to the demolition of previously existing buildings of unknown construction-HAIL activity A10.
- Heavy metals and TPHs associated with the storage of farm equipment vehicles, rubbish in paddocks and burn pile- HAIL activity I.

		999	Transfer to Grant Raymond Askew and Karen Gail Askew					
May 2018		018	Transfer to John Barrett and Tania Maree Barrett					

The CT information available indicates that the property has had several owners, of various occupations.

5.8.2 Interviews

The current owners were not interviewed as part of this investigation.

5.8.3 Aerial Photographs

1940-44 Aerial

A building, inferred to be a dwelling, and a detached shed/garage, are located in the northwestern corner of the subject site. The remainder of the site appears to be vegetated with

grass and used for grazing.

1955-59 Aerial

Three large sheds have been constructed in the northern part of the subject site. The remainder of the site appears to be in pasture, with the exception of the southern end which

is vegetated with trees and shrubs.

1960-64 Aerial

The only significant changes from 1955-59, are the demolition of one of the sheds, the

southern end of the site has been returned to pasture.

1965-69 Aerial

The shed/garage associated with the dwelling has been extended or replaced. The image

quality is poor, however, the land surrounding the dwelling to the dwelling appear to be used for cropping activities. Another of the sheds identified in the 1955-59 aerial has been demolished, however, a new shed has been constructed in the vicinity. The remainder of the

site appears to be used for cropping activity.

1970-74 Aerial

All the sheds identified in the 1955-59 and 1965-69 aerial photos, have been demolished. The

majority of site appears to have been returned to pasture.

1975-79 Aerial

There are no significant changes from 1970-74.

1980-84 Aerial

A garage has been constructed in the north-western corner of the subject site. There are no

significant changes to the remainder of the site.

Fraser Thomas

1990-94 Aerial

The image quality is poor, however, a new structure, inferred to be a shed, has been

constructed in the vicinity of the dwelling.

1995-99 Aerial

The image quality is poor, however, there are no significant changes from 1990-94.

2000-04 Aerial

No significant changes from the previous aerial, apart from the garage being demolished and

there are what look like dirt bike tracks in paddocks in the southern half of the site.

2004-10 Aerial

A new dwelling has been constructed in the southern half of the site. The paddocks in the southern half of the site are been used to store items that are unable to be identified due to

the poor image quality, but are of vehicle size. There is a paddock racing track in this part of

the site.

2010-15 Aerial

The land use in the southern half of the site has changed significantly. Two sheds/garages and

a swimming pool have been constructed in the vicinity of the dwelling. Landscaping has also been undertaken. The paddocks in the southern half of the site are being used for the storage of building material, multiple vehicles and trailers. Along the western boundary, several of the

vehicles appear to be partially buried. Several stockpiles of material, of unknown origin are also present in the southern half of the site. The northern portion of the site appears

unchanged.

2019 Aerial

With the exception of a small fenced of area used, the southern half of the site is no longer being used for the storage of building material, multiple vehicles and trailers. The stockpiles

identified in the 2010-15 aerial photo appear to be still on site, but are vegetated with grass.

5.8.4 Site Walkover Results

A site walkover of the subject site was undertaken by Sam Gladwin, Engineering Geologist of

FTL on 3rd July 2020.

The site is generally level, with gentle undulations.

The north western corner and middle parts of the site are used for residential purposes.

November 2020 Project No. CH00417

Fraser Thomas

There appears to be some form of dumping occurring between the dwelling and associated sheds/garages located in the north-western corner of the site.

The remainder of the site generally consists of paddocks vegetated with grass. One of the paddocks has been cleared of vegetation.

The driveway surface is unsealed.

There is a fenced off storage area in the southern half of the site, which is currently being used to store shipping containers, and what appears to be concrete form work boxing.

Demolition material was observed along the western boundary, in the southern part of the site.

Stockpiles of soil comprising silt, sand and gravel approximately 3 to 4 m in height, were observed, at the south end of the site. The southernmost stockpile was observed to also contain demolition material mostly comprising concrete bricks.

5.8.5 Council Records

The Council property file was reviewed. The only relevant information found related to building consents issued by Council:

- 1972 Building Permit documents for a new shed
- 1976 Building Permit documents for a new garage
- 1982 Building Permit documents for alterations to dwelling
- 1991 Building Permit documents for extension to dwelling
- 2004 Building Consent documents for new dwelling
- 2007 Building Consent documents for new, barn and relocated garage

In a 1976 letter to the council in regards to the location of the proposed new garage in the north-western part of the site, the son of the then owner notes that an area used for gardening is located in this part of the site.

5.8.6 Listed Land Use Register (LLUR)

A contaminated site enquiry was sent to Canterbury Regional Council on 16 July 2020, for information on the subject site held on their Listed Land Use Register (LLUR). There are no records associated with the site under the Environment Canterbury LLUR. The LLUR statement for this site is included in Appendix D.

5.8.7 Discussion

Since at least 1944, the site appears to have been used for pastoral purposes, with parts of the site intermittently used for cropping activities.

Potential HAIL activities identified for this property relates to the following:

 Heavy metals, PAHs, and asbestos associated with current and historical storage of rubbish, vehicles, demolition/construction material, and stockpiles of unknown origin in the north-western corner and southern half of the site-HAIL activity E1 and I.

6.0 NESCS CONSENTING REQUIREMENTS

The NESCS governs a number of activities, including soil sampling, soil disturbance, subdivision and changes of land use on potentially contaminated land in New Zealand. In general, the rules of the NESCS apply to sites on which it is "more likely than not" that a HAIL (Hazardous Activities and Industries List) activity has occurred or is occurring (Regulation 5(7).

Based on the potential issues identified above, the parcels making up the site are considered to potentially have been subject to the HAIL activities listed in Table 10.

It is recommended that these potential/actual HAIL areas be further investigated and remediated, as necessary, as part of enabling (pre-construction) works prior to any bulk earthworks or other soil disturbance activities. If this is done and these areas are validated as being free of contamination, then subsequent earthworks and soil disturbance activities can be undertaken without having to consider contamination issues, other than accidental discovery protocols for unexpected contamination.

Table 10: Potential HAIL activities identified at the subject sites

HAIL Activity	Applicable Lots	Possible Contaminants	
A10 – Persistent pesticide bulk	Lot 1 DP 73583 341 Trices Road – Historical poultry sheds	Heavy Metals and Organo	
storage or use including sport turfs,	Lot 2 DP 73583 341 Trices Road – Historical poultry sheds and Orchard	-chlorine Pesticides

	Pt RS 2423 – Stockpiled soil including demolition debris of unknown origin, historical storage of		
	building/demolition material		

7.0 CONCLUSIONS AND RECOMMENDATIONS

This investigation has confirmed that part of the subject site has only been used for rural/residential and grazing purposes. The NESCS does not apply to these portions of the site under Regulation 5(7).

This investigation has confirmed that the subject site has only been used for rural/residential and grazing purposes and identified few localised potential or actual HAIL activities:

- Activity A10: Persistent pesticide bulk storage or use including sport turfs, market gardens, orchards, glasshouses or spray sheds. This relates to persistent pesticide use associated with the former poultry farm (no longer present on site), orchards, and vegetable growing on Lot 1 and 2 73583, Lot 1 DP 3896, Lot 1 DP 5284 and Lot 1 DP 78905. It is recommended that these areas be further investigated and soil sampling undertaken to confirm identified HAIL activity.
- Activity I: Land subject to intentional or accidental release of hazardous substances in sufficient quantity that it could be a risk to human health or the environment. This applies to:
 - Historical railway along the western boundary of Lots 1& 2, DP73583, Pt RS3122 and RS39794.
 - Existing stockpiles on Pt RS 2423. The stockpiled soil appeared to be silts and sands and occasional gravel, with some demolition materials (concrete blocks) of unknown origin. Soil sampling may be required by Council to confirm the soils are not contaminated.
 - Rubbish and old machinery/car body remains on Lot 1 DP 73583, Lots 1 and 2 DP 360577, Pt RS 2423 (historical) These areas need to be cleared of rubbish and then the underlying ground inspected for signs of contamination (staining or odour). Soil sampling is likely to be required at this time to confirm the presence or absence of soil contamination.
 - Other activities such as historical fires and burn piles.
- Activity E1: Asbestos products manufacture or disposal including sites with buildings containing asbestos products known to be in a deteriorated condition. ACM demolition material from historical buildings (HAIL activity E1) on Lots 1 and 2 DP 73583, Pt RS 3122, Lot 1 3896, Lot 1 DP5284, Lot 1 DP360577, and Pt RS 2423. A review of the available historical aerials of these sites show that several small sheds/buildings have been historically present at least since 1940. Asbestos based products were prominent in New Zealand homes and other buildings from the 1920s to the mid-1980s. Therefore, it is likely that these soils could potentially be contaminated with asbestos from prior demolition activities. Hence, it is recommended that this area be further investigated and soil sampling be undertaken to confirm the identified HAIL activity.

In summary, based on the information presented in this report, whilst it is clear that historic HAIL activities have occurred at the site, it is uncertain what effects, if any, there have been on

site soils. Therefore, in accordance with NESCS requirements, a Detailed Site Investigation (DSI) is required in order to assess site soils to determine environmental effects, or otherwise.

If further investigation is not undertaken prior to lodging for resource consent, then any future subdivision would be a discretionary activity under Regulation 11 of the NESCS.

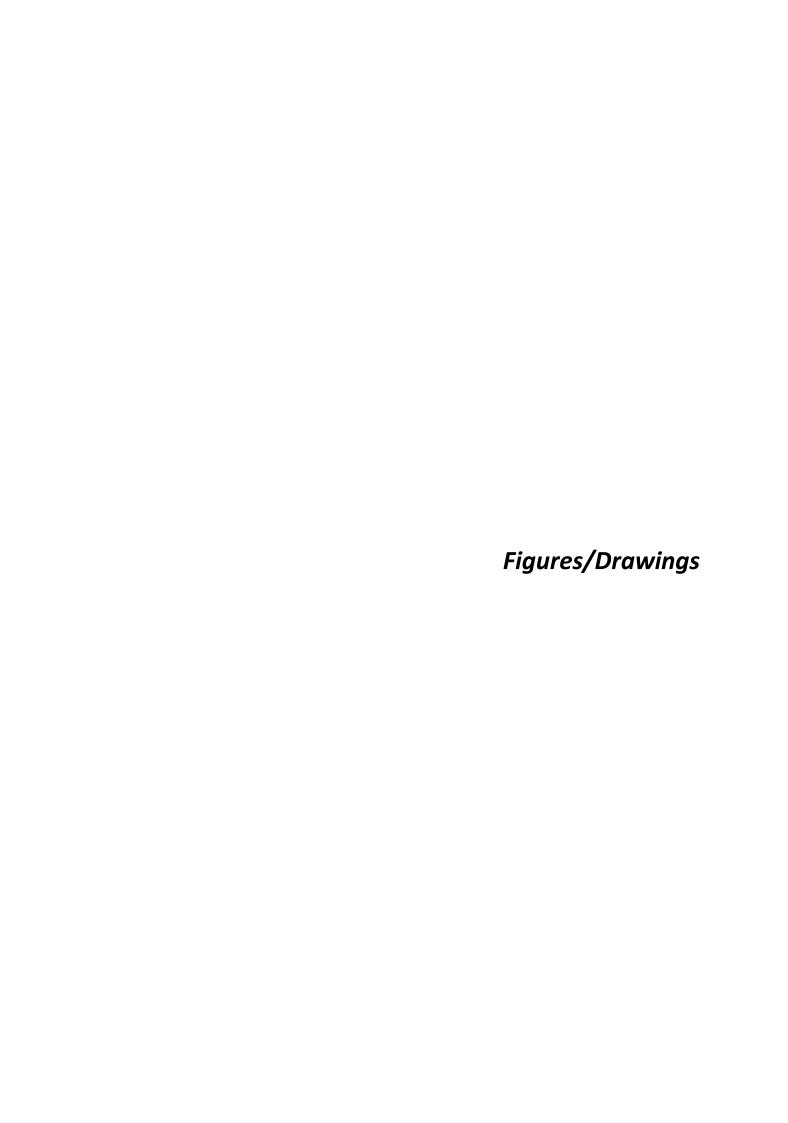

8.0 LIMITATIONS

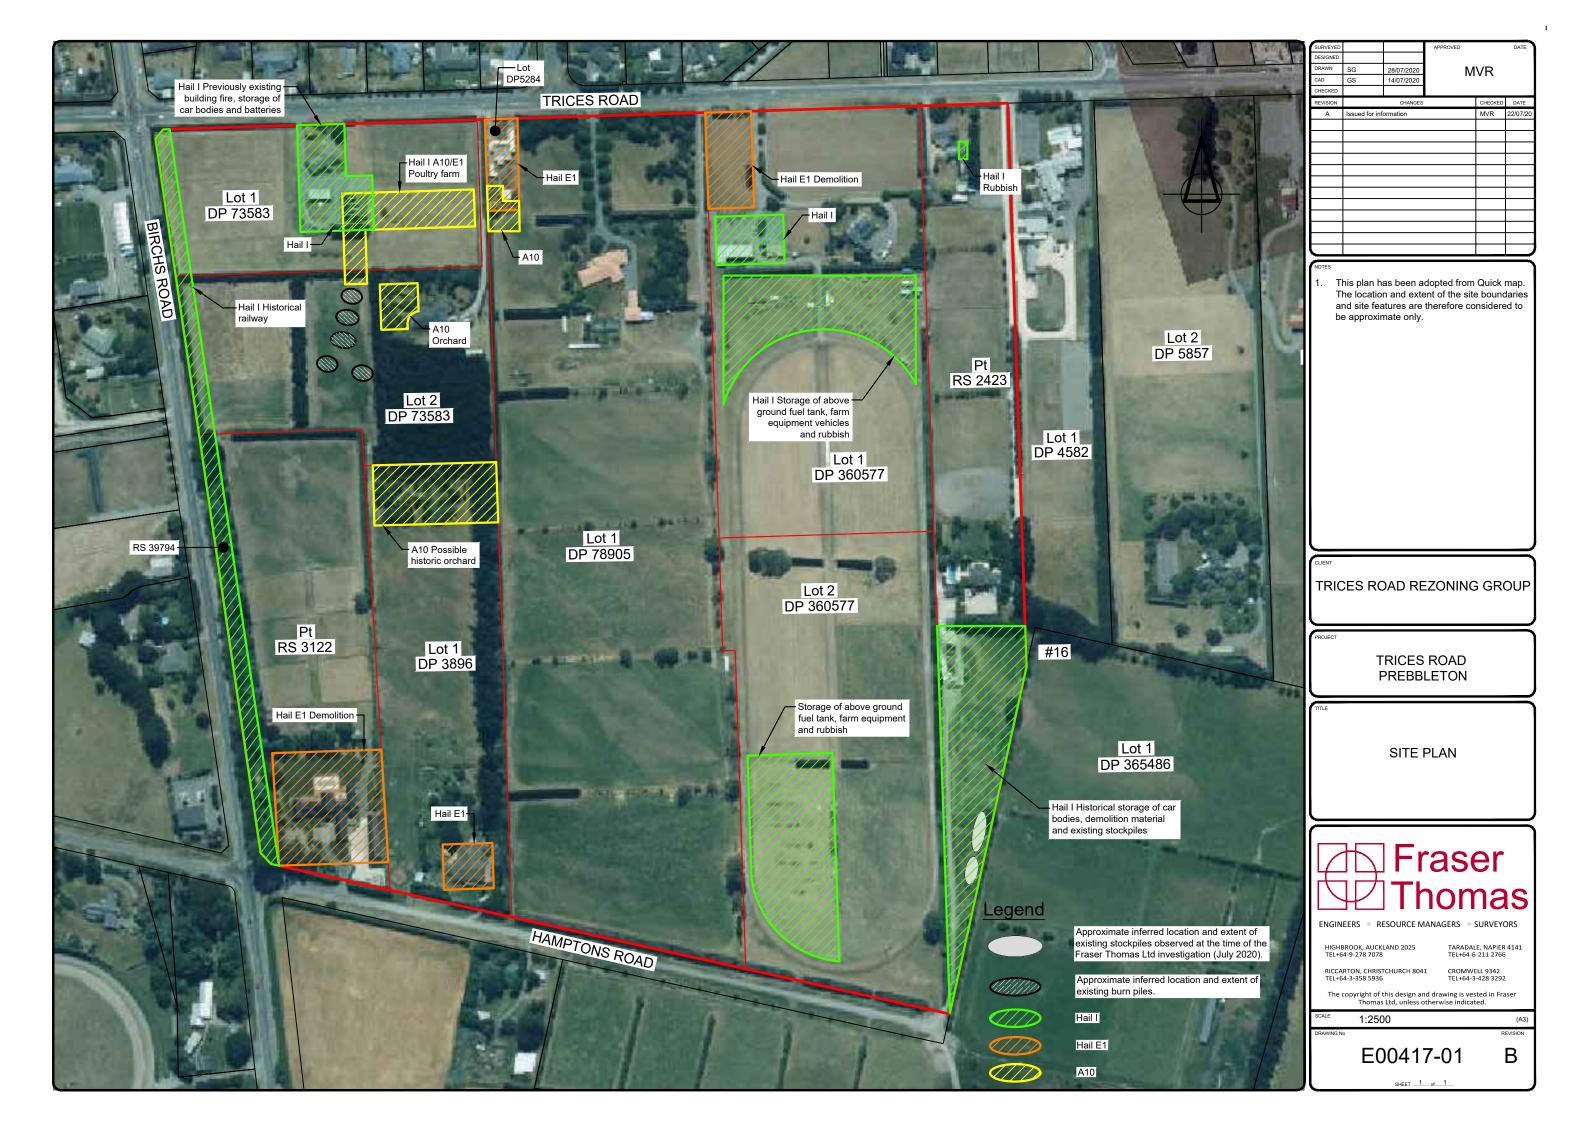

We have performed our services for this project in accordance with current professional standards for an assessment of the nature and extent of any soil contamination on-site, based upon detailed site assessment investigations and current regulatory standards for site contamination. The scope of the site assessment activities was generally in accordance with the Ministry for Environment Contaminated Land Management Guideline's (Parts 1 (2003), 2 (2003) and 5 (2004)) and the NESCS (2011). Conclusions on actual or potential contamination cannot be applied to areas outside of the site investigation.

We do not assume any liability for misrepresentation or items not visible, accessible or present at the subject site during the time of the site inspection.

Copyright of this report is held by Fraser Thomas Ltd. The professional opinion expressed herein has been prepared solely for, and is furnished to our client and Environment Canterbury (this being a regional planning requirement), on the express condition that it will only be used for the works and the purpose for which it is intended.

No liability is accepted by this firm or by any principal, or director, or any servant or agent of this firm, in respect of its use by any other person, and any other person who relies upon any matter contained in this report does so entirely at its own risk. This disclaimer shall apply notwithstanding that this report may be made available to any person by any person in connection with any application for permission or approval, or pursuant to any requirement of law.

Dear Sir/Madam

Thank you for submitting your property enquiry in regards to our Listed Land Use Register (LLUR) which holds information about sites that have been used, or are currently used for activities which have the potential to have caused contamination.

The LLUR statement provided indicates the location of the land parcel(s) you enquired about and provides information regarding any LLUR sites within a radius specified in the statement of this land.

Please note that if a property is not currently entered on the LLUR, it does not mean that an activity with the potential to cause contamination has never occurred, or is not currently occurring there. The LLUR is not complete, and new sites are regularly being added as we receive information and conduct our own investigations into current and historic land uses.

The LLUR only contains information held by Environment Canterbury in relation to contaminated or potentially contaminated land; other information relevant to potential contamination may be held in other files (for example consent and enforcement files).

If your enquiry relates to a farm property, please note that many current and past activities undertaken on farms may not be listed on the LLUR. Activities such as the storage, formulation and disposal of pesticides, offal pits, foot rot troughs, animal dips and underground or above ground fuel tanks have the potential to cause contamination.

Please contact and Environment Canterbury Contaminated Sites Officer if you wish to discuss the contents of the LLUR statement, or if you require additional information. For any other information regarding this land please contact Environment Canterbury Customer Services.

Yours sincerely

Contaminated Sites Team

Summary of sites:

Site ID	Site Name	Location	HAIL Activity(s)	Category
120645	341 Trices Road, Prebbleton	341 Trices Road, Prebbleton	A10 - Persistent pesticide	Not Investigated
			bulk storage or use;	

Please note that the above table represents a summary of sites and HAILs intersecting the area of enquiry only.

Information held about the sites on the Listed Land Use Register

Site 120645: 341 Trices Road, Prebbleton (Intersects enquiry area.)

Site Address: 341 Trices Road, Prebbleton

Legal Description(s): Lot 1 DP 73583

Site Category: Definition:

Not Investigated

Verified HAIL has not been investigated.

Land Uses (from HAIL):

Period From	Period To	HAIL land use	
1965	1984	Persistent pesticide bulk storage or use including sports turfs, market	
		gardens, orchards, glass houses or spray sheds	

Notes:

7 Jan 2016 This record was created as part of the Selwyn District Council 2015 HAIL identification project.

7 Jan 2016 Area defined from 1965 to 1984 aerial photographs. A poultry farm (persistent pesticides) was noted in aerial photographs

reviewed.

Investigations:

There are no investigations associated with this site.

Listed Land Use Register

What you need to know

Everything is connected

What is the Listed Land Use Register (LLUR)?

The LLUR is a database that Environment Canterbury uses to manage information about land that is, or has been, associated with the use, storage or disposal of hazardous substances.

Why do we need the LLUR?

Some activities and industries are hazardous and can potentially contaminate land or water. We need the LLUR to help us manage information about land which could pose a risk to your health and the environment because of its current or former land use.

Section 30 of the Resource Management Act (RMA, 1991) requires Environment Canterbury to investigate, identify and monitor contaminated land. To do this we follow national guidelines and use the LLUR to help us manage the information.

The information we collect also helps your local district or city council to fulfil its functions under the RMA. One of these is implementing the National Environmental Standard (NES) for Assessing and Managing Contaminants in Soil, which came into effect on 1 January 2012.

For information on the NES, contact your city or district council.

How does Environment Canterbury identify sites to be included on the LLUR?

We identify sites to be included on the LLUR based on a list of land uses produced by the Ministry for the Environment (MfE). This is called the Hazardous Activities and Industries List (HAIL)¹. The HAIL has 53 different activities, and includes land uses such as fuel storage sites, orchards, timber treatment yards, landfills, sheep dips and any other activities where hazardous substances could cause land and water contamination.

We have two main ways of identifying HAIL sites:

- We are actively identifying sites in each district using historic records and aerial photographs. This project started in 2008 and is ongoing.
- We also receive information from other sources, such as environmental site investigation reports submitted to us as a requirement of the Regional Plan, and in resource consent applications.

¹The Hazardous Activities and Industries List (HAIL) can be downloaded from MfE's website www.mfe.govt.nz, keyword search HAIL

How does Environment Canterbury classify sites on the LLUR?

Where we have identified a HAIL land use, we review all the available information, which may include investigation reports if we have them. We then assign the site a category on the LLUR. The category is intended to best describe what we know about the land use and potential contamination at the site and is signed off by a senior staff member.

Please refer to the Site Categories and Definitions factsheet for further information.

What does Environment Canterbury do with the information on the LLUR?

The LLUR is available online at www.llur.ecan.govt.nz. We mainly receive enquiries from potential property buyers and environmental consultants or engineers working on sites. An inquirer would typically receive a summary of any information we hold, including the category assigned to the site and a list of any investigation reports.

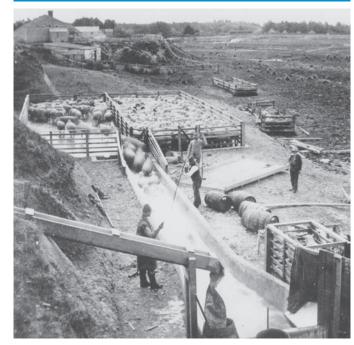

We may also use the information to prioritise sites for further investigation, remediation and management, to aid with planning, and to help assess resource consent applications. These are some of our other responsibilities under the RMA.

If you are conducting an environmental investigation or removing an underground storage tank at your property, you will need to comply with the rules in the Regional Plan and send us a copy of the report. This means we can keep our records accurate and up-to-date, and we can assign your property an appropriate category on the LLUR. To find out more, visit www.ecan.govt.nz/HAIL.

IMPORTANT!

The LLUR is an online database which we are continually updating. A property may not currently be registered on the LLUR, but this does not necessarily mean that it hasn't had a HAIL use in the past.

Sheep dipping (ABOVE) and gas works (TOP) are among the former land uses that have been identified as potentially hazardous. (Photo above by Wheeler & Son in 1987, courtesy of Canterbury Museum.)

My land is on the LLUR – what should I do now?

IMPORTANT! Just because your property has a land use that is deemed hazardous or is on the LLUR, it doesn't necessarily mean it's contaminated. The only way to know if land is contaminated is by carrying out a detailed site investigation, which involves collecting and testing soil samples.

You do not need to do anything if your land is on the LLUR and you have no plans to alter it in any way. It is important that you let a tenant or buyer know your land is on the Listed Land Use Register if you intend to rent or sell your property. If you are not sure what you need to tell the other party, you should seek legal advice.

You may choose to have your property further investigated for your own peace of mind, or because you want to do one of

the activities covered by the National **Environmental Standard for Assessing** and Managing Contaminants in Soil. Your district or city council will provide further information.

If you wish to engage a suitably qualified experienced practitioner to undertake a detailed site investigation, there are criteria for choosing a practitioner on www.ecan.govt.nz/HAIL.

I think my site category is incorrect – how can I change it?

If you have an environmental investigation undertaken at your site, you must send us the report and we will review the LLUR category based on the information you provide. Similarly, if you have information that clearly shows your site has not been associated with HAIL activities (eg. a preliminary site investigation), or if other HAIL activities have occurred which we have not listed, we need to know about it so that our records are accurate.

If we have incorrectly identified that a HAIL activity has occurred at a site, it will be not be removed from the LLUR but categorised as Verified Non-HAIL. This helps us to ensure that the same site is not re-identified in the future.

Contact us

Property owners have the right to look at all the information Environment Canterbury holds about their properties.

It is free to check the information on the LLUR, online at www.llur.ecan.govt.nz.

If you don't have access to the internet, you can enquire about a specific site by phoning us on (03) 353 9007 or toll free on 0800 EC INFO (32 4636) during business hours.

Listed Land Use Register

Site categories and definitions

When Environment Canterbury identifies a Hazardous Activities and Industries List (HAIL) land use, we review the available information and assign the site a category on the Listed Land Use Register. The category is intended to best describe what we know about the land use.

If a site is categorised as **Unverified** it means it has been reported or identified as one that appears on the HAIL, but the land use has not been confirmed with the property owner.

If the land use has been confirmed but analytical information from the collection of samples is not available, and the presence or absence of contamination has therefore not been determined, the site is registered as:

Not investigated:

- A site whose past or present use has been reported and verified as one that appears on the HAIL.
- The site has not been investigated, which might typically include sampling and analysis of site soil, water and/or ambient air, and assessment of the associated analytical data.
- There is insufficient information to characterise any risks to human health or the environment from those activities undertaken on the site. Contamination may have occurred, but should not be assumed to have occurred.

If analytical information from the collection of samples is available, the site can be registered in one of six ways:

At or below background concentrations:

The site has been investigated or remediated. The investigation or post remediation validation results confirm there are no hazardous substances above local background concentrations other than those that occur naturally in the area. The investigation or validation sampling has been sufficiently detailed to characterise the site.

Below guideline values for:

The site has been investigated. Results show that there are hazardous substances present at the site but indicate that any adverse effects or risks to people and/or the environment are considered to be so low as to be acceptable. The site may have been remediated to reduce contamination to this level, and samples taken after remediation confirm this.

Managed for:

The site has been investigated. Results show that there are hazardous substances present at the site in concentrations that have the potential to cause adverse effects or risks to people and/or the environment. However, those risks are considered managed because:

- the nature of the use of the site prevents human and/or ecological exposure to the risks; and/or
- the land has been altered in some way and/or restrictions have been placed on the way it is used which prevent human and/or ecological exposure to the risks.

Partially investigated:

The site has been partially investigated. Results:

- demonstrate there are hazardous substances present at the site; however, there is insufficient information to quantify any adverse effects or risks to people or the environment; or
- do not adequately verify the presence or absence of contamination associated with all HAIL activities that are and/or have been undertaken on the site.

Significant adverse environmental effects:

The site has been investigated. Results show that sediment, groundwater or surface water contains hazardous substances that:

- · have significant adverse effects on the environment; or
- are reasonably likely to have significant adverse effects on the environment.

Contaminated:

The site has been investigated. Results show that the land has a hazardous substance in or on it that:

- has significant adverse effects on human health and/or the environment; and/or
- is reasonably likely to have significant adverse effects on human health and/or the environment.

If a site has been included incorrectly on the Listed Land Use Register as having a HAIL, it will not be removed but will be registered as:

Verified non-HAIL:

Information shows that this site has never been associated with any of the specific activities or industries on the HAIL.

Please contact Environment
Canterbury for further information:
