SUPPLEMENTARY EVIDENCE OF JOHN ISELI

- 1 My full name is John Graham Iseli. I have been a consulting Air Quality Scientist for the past 23 years and have 29 years of experience in the air quality field. My qualifications and experience are detailed in my evidence in chief.
- 2 In this evidence I provide a response to the evidence¹ Mr Andrew Curtis presented in the hearing for the Proposed Plan Changes PC81 and PC82. I also provide a peer review of Mr Van Kekem's supplementary evidence.
- 3 Mr Curtis at paragraph 8.8 considered that I had stated that the "site might need to change technologies". I consider that to be a misinterpretation of my comments. The point I made in response to the Commissioner's question was that the PRRP composting process can continue to operate as currently consented, but there are options for future improvements to the composting process if required. Those improvement options, such as forced aeration, would be expected to reduce odour emissions (also mentioned in paragraph 19 of Mr Van Kekem's supplementary evidence). However, my evidence remains that the existing open windrow composting operation could continue if the proposed plan changes are approved.
- 4 I have peer reviewed the supplementary evidence of Mr Van Kekem. I confirm that I agree with the statements made in his supplementary evidence in full. I consider that Mr Van Kekem has undertaken a comprehensive assessment of the potential odour effects of the PRRP composting operation and has reached his conclusions based on sound analysis of the evidence.

¹ Summary Statement of Andrew Curtis - In the matter Requests by Rolleston Industrial Developments Limited and Brookside Road Residential Limited to rezone land in Rolleston (PC81 and PC82)

- 5 I confirm my opinion that future dwellings in the proposed developments that are located at least 600m from the PRRP active composting area are not expected to experience odour nuisance effects. I consider that the PRRP composting operation will be able to continue to operate in a manner that complies with the conditions of consent (including the Odour and Dust Management Plan) that requires no offensive or objectionable odour beyond the site boundary.
