Hi Andrew

Thanks for sending that through. We don't have any further queries with regard to those responses.

However, we do have one further question about the noise limit Condition suggested in section 13.0 of the Marshall Day report. MDA propose noise limits which would apply within the notional boundary of any dwelling. This leaves a loose end around the situation for future dwellings – would the Consent Holder need to modify their operation to comply at these new noise receivers, or have 'existing use rights' and so not modify their operation – but in doing so create a possible reverse sensitivity effect? For a recent similar large scale quarry the noise limits were applied at the site boundary (with a relaxation in the vicinity of the site entrance), as *"it is simpler from a noise monitoring or enforcement perspective as access to private land is not required. It also provides certainty for both [the applicant] and their neighbours in that the "noise footprint" of the site is clearly defined, irrespective of any future development around the quarry."*

Is there a reason for the departure from that previous approach in this case? We note that the noise limits as proposed would also enable noise emissions considerably in excess of what have been predicted or assessment in the MDA report.

Kind Regards
Rewa

Hi both – answers to your respective s92 Questions attached. Can you please let me know if there are any residual matters? I will carry on with preparing the notifiaton report. We will likely organise a site visit in the next month or so – I'll let you know a range of dates.

Thanks

Regards

Andrew
