

Organic bin tips

To ensure your organics wheellie bin is fully emptied every time:

Keep the bin weight reasonable. If you find it difficult to move the bin, then you may find it exceeds the truck lifting limits and could be left behind unemptied.

Keep organic bin contents loose. Don't compact your material by standing on it (it may not come out when tipped by the truck).

Place weeds, branchy material or newspaper at the bottom of the bin before filling with grass clippings. This reduces the likelihood of the grass clippings getting stuck.

Organics only! **Absolutely NO plastic bags!**
No metals, glass, rocks or stones, bricks or rubbish please. These cause considerable damage to the organics shredder.

Put flax and cabbage leaves in your rubbish.

Make sure your bin is not over full – the lid must close.
